

Ideation Phase
Brainstorm & Idea Prioritization

Date	29 June 2026
Team ID	
Project Name	Library Book Request System using ServiceNow
Maximum Marks	4 Marks

Step 1: Problem Identification and Selection

As this is an individual project, I analyzed common problems faced in college library management. I observed that the traditional process of requesting library books is often manual, time-consuming, and lacks proper tracking. Students may not know the status of their requests, and librarians have to manually maintain request records.

After evaluating different ideas, I selected the **Library Book Request System** because it solves a real-world problem and can be effectively implemented using the ServiceNow platform.

Problem Statement:

Develop a ServiceNow application that allows students to request books online, automatically generates a request number, validates that the issue date is not in the past, and sends an email notification to the librarian whenever a new request is submitted.

Step 2: Brainstorming, Idea Listing and Prioritization

Brainstormed Ideas

S.No	Idea	Feasibility	Priority
1	Library Book Request System	High	High
2	Student Leave Management System	High	Medium
3	Hostel Complaint Management System	Medium	Medium
4	College Event Registration System	High	Low
5	Asset Tracking System	Medium	Low

Idea Selection

The **Library Book Request System** was selected because:

- It addresses a real-life college library requirement.

- It can be implemented using ServiceNow without complex integrations.
- It demonstrates the use of custom tables, Business Rules, Notifications, and form validation
- It improves efficiency by automating the book request process and reducing manual work.

Final Selected Idea

Library Book Request System using ServiceNow
